## TECHNICAL GUIDE

### SPLIT-SYSTEM AIR-COOLED CONDENSING UNITS

**YD360, 480 & 600  
30 THRU 50 NOMINAL TONS**

### Description

These units are completely assembled, piped and wired at the factory to provide one-piece shipment and rigging. Each unit is pressurized with a holding charge of Refrigerant R-410A for storage and/or shipping.

The compact design, clean styling, low silhouette, and quiet operation make these condensing units suitable for almost any outdoor location. On rooftops . . . because they weigh much less than a single package unit of similar capacity and are much easier to rig and support. At ground level . . . because their ample sub-cooling capacity allows them to be located three or more stories below the evaporator coil.

Every condenser coil is pressurized with air to 325 psig and leak tested under water. After assembly, the unit is pressurized with a combination of Refrigerant R-410A and nitrogen to 450 psig for pressure testing and additional leak testing. During this pressure test, the operation of the high pressure control is checked. As the unit is being evacuated and dehydrated, the operation of the low pressure control is checked. Every compressor, condenser fan motor, crankcase heater, and electrical control circuit is checked to assure a trouble-free start-up and years of reliable operation.

The condenser fan guards are vinyl-coated to provide additional rust protection and to enhance the appearance of the unit.

Compressors are mounted on rubber isolators to reduce the transmission of vibration. Vertical discharge condenser fans direct sound upward and away from any surrounding structures.

All sheet metal parts are constructed of commercial grade galvanized steel. After fabrication, each part is thoroughly cleaned to remove any grease or dirt from its surfaces. The external parts are coated with a powder paint to assure a quality finish for many years. This UL approved coating system has passed the 1000 hour, 20% salt spray test per ASTM Standard B117.

All models include a 1-year limited warranty on the complete unit. An additional 4-year extended compressor warranty is available as an option on all models.

A matching line of Evaporator Blower units is also offered to meet your precise capacity and air handling requirements.

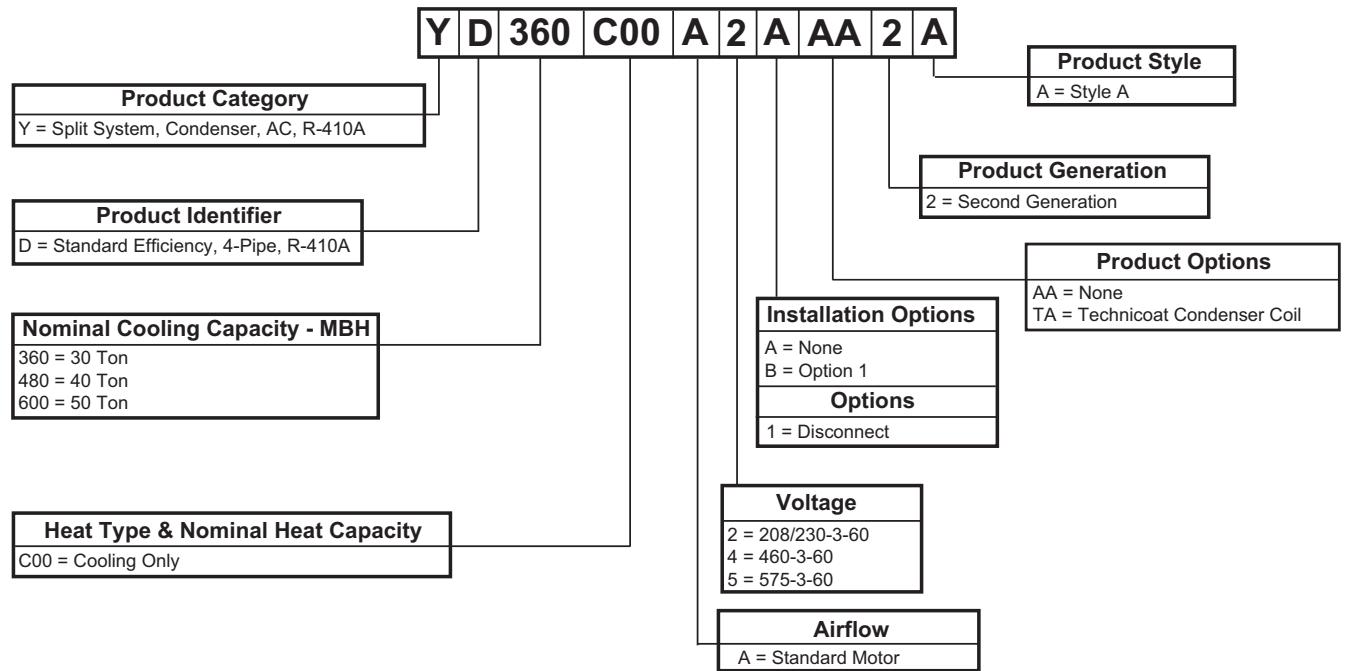

ISO 9001  
Certified Quality  
Management System

## Product Nomenclature

### Configured Split Condenser Model Number Nomenclature

## Condensing Unit Features and Benefits

- Meets or exceeds ASHRAE 90.1 standards.
- Scroll compressors provide both high efficiency and reliability.
- Simplicity® SE Controls
- Dual refrigerant circuits.
- Condenser coils are constructed of copper tubes and aluminum fins for durability and long lasting efficient operation.
- Crankcase heaters that will be de-energized when the compressor is operating.
- Both high and low pressure controls. Since these controls are self-contained, there are no capillary lines to be damaged.
- Solid state or internal line break compressor motor protection.
- Class 2, 24-volt thermostat control circuit.
- Factory installed service valves are standard.
- Two filter-driers are shipped in the unit's control box for field installation in the liquid line near the condensing unit.
- Copper stub-outs are factory mounted on the suction and liquid line service valves to simplify the field piping connections.
- Multiple controls to provide stable system operation at ambient temperatures down to 40°F with kits available for operation to 0°F.
- Capacity staging for more economical operation and more even temperature levels within the conditioned space.
- A lockout circuit to prevent the unit from cycling on safety control.
- Pump-out on unit startup to prevent liquid refrigerant returning to the compressor is standard on all models.
- Inherently protected condenser fan motors.
- V-Coil Design with exterior service port connections.
- Five-minute anti-short cycle timer and minimum compressor run time.
- Factory installed disconnect and Technicoat coils option.
- Self contained high and low pressure controls.

## Condensing Unit Accessories

- Low ambient VFD control to 0° F.
- Phase Monitors - Designed to prevent unit damage. The phase monitor will shut the unit down and out-of phase condition.
- Hot Gas Bypass Kit - That will provide a metered flow of compressor discharge gas to the system's evaporator coil during reduced load operation.
- Optional skid for fork truck handling (requires 96" length forks).

## Guide Specifications

### SPLIT SYSTEM COOLING ONLY CONDENSING UNITS MODELS YD360, YD480 AND YD600

#### THE INSTALLER SHALL:

- Furnish York® air-cooled condensing units or equivalent in accordance with the performance schedule shown on the plans, and
- Install each unit as shown on the plans in accordance with:
  - The manufacturers recommendations and
  - All applicable national and local codes

#### EACH UNIT SHALL BE:

- CSA approved.
- Completely assembled for one-piece shipping and rigging.
- Leak pressure and functionally tested at the factory to assure a trouble-free start-up after installation.
- Covered by a 1-year limited parts warranty on the complete unit.
- In current production with published literature available to check performance, limitations, specifications, power requirements, dimensions, operation and appearance.

#### EACH UNIT SHALL HAVE:

- A steel angle frame to provide the rigid support required for shipping, rigging and years of dependable operation.
- Zinc-coated steel that has been finished by a powder paint process to provide a long lasting, quality appearance.
- Removable panels for easy access to all internal components during maintenance and service.

#### THE DIMENSIONS OF EACH UNIT SHALL:

- Not exceed those specified on the plans.

#### EACH COMPRESSOR SHALL:

- Be mounted on isolators to minimize the transmission of vibration.

#### ALL CONDENSER COILS SHALL:

- Be draw through design.
- Be constructed of copper tubes arranged in staggered rows and mechanically expanded into aluminum fins.

#### THE CONDENSER FAN MOTOR(S) SHALL:

- Be directly connected to the condenser fans.
- Have permanently lubricated ball bearings.
- Have inherent overload protection.
- Motors shall be three phase.
- The propeller-type condenser fans shall be arranged for vertical discharge of the condenser air.

#### THE WIRING FOR EACH UNIT SHALL INCLUDE:

- A crankcase heater (one per compressor)
- All 24-volt temperature control circuit.
- Both high and low pressure cutouts.
- Solid-state or internal line break compressor motor protection.
- Condenser fan motor control to assure stable operation at ambient temperatures down to 40°F.

#### THE REFRIGERANT PIPING of each system shall include:

- A filter-drier shipped for field installation.

## Physical Data

		575-3-60	540	630				

<sup>1</sup> Rated in accordance with AHRI Standard 110, Range "A" Utilization Voltage.

<sup>2</sup> Low Ambient accessories are available to permit stable system operation at ambient temperatures down to 0°F.

## Cooling Ratings

### Cooling Ratings

Outdoor Unit	Condensing Unit Only			Indoor Unit	System Cooling Capacity <sup>1</sup>			Rated Airflow (CFM)
	Gross Capacity <sup>2</sup> (MBH)	kW	EER		Gross Capacity <sup>3</sup> (MBH)	EER	IEER	
YD360	333	29.9	11.1	ND360	375	10.0	11.1	12,000
YD480	469	37.4	12.5	ND480	500	10.0	10.8	16,000
YD600	576	50.0	11.5	ND600	620	10.0	10.4	17,500

<sup>1</sup> Testing in accordance with the Unitary Large Equipment certification program, which is based on AHRI Standard 340/360.

<sup>2</sup> Condensing unit only ratings are at 45 F SST and 95 F entering-air temperature.

<sup>3</sup> Deduct 1 MBH when a unit operates at 208 volts.

EER = Energy Efficiency Ratio at full load - the cooling capacity in Btu's per hour (Btuh) divided by the power input in watts, expressed in Btuh per watt (Btuh/watt).

EER; condensing unit only ratings based on 45° F SST and 95°F entering outdoor air temperature.

IEER - A single number cooling part-load efficiency figure that is calculated based on equipment stages and EER at these capacity stages (ANSI/AHRI STD 340/360 - 2007)

### LEGEND

EER = Energy Efficiency Ratio

SST = Saturated Suction Temperature

AHRI = Air Conditioning and Refrigeration Institute

IEER = Integrated Energy Efficiency Ratio

## Capacity Performance

<sup>1</sup> These capacities are gross ratings. For net capacity, deduct supply air blower motor, MBh. Example: Refer to the appropriate Blower Performance Table for the BHP of the supply air blower motor, MBh =  $3.415 \times \text{kW}$  and  $\text{kW} = \text{BHP} \times 0.746 \div \text{nameplate rated motor efficiency}$ .

<sup>2</sup> These ratings include the condenser fan motors and the compressor motors but not the supply air blower motor.

<sup>1</sup> These capacities are gross ratings. For net capacity, deduct supply air blower motor, MBh. Example: Refer to the appropriate Blower Performance Table for the BHP of the supply air blower motor, MBh =  $3.415 \times \text{kW}$  and  $\text{kW} = \text{BHP} \times 0.746 \div \text{nameplate rated motor efficiency}$ .

<sup>2</sup> These ratings include the condenser fan motors and the compressor motors but not the supply air blower motor.

<sup>1</sup> These capacities are gross ratings. For net capacity, deduct supply air blower motor, MBh. Example: Refer to the appropriate Blower Performance Table for the BHP of the supply air blower motor, MBh = 3.415 x kW and kW = BHP x 0.746 ÷ nameplate rated motor efficiency.

<sup>2</sup> These ratings include the condenser fan motors and the compressor motors but not the supply air blower motor.

## Typical Wiring Diagrams

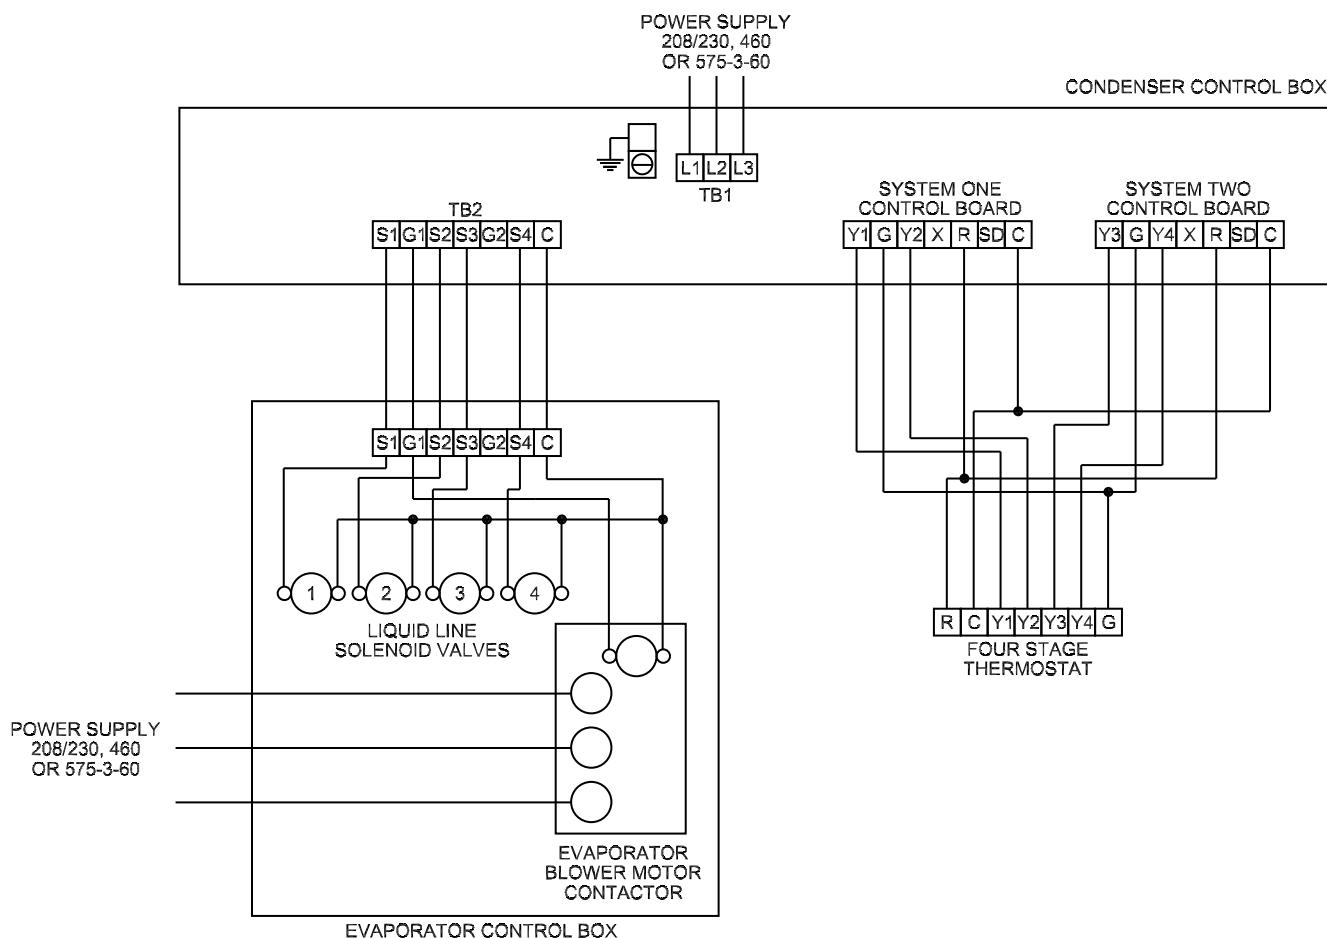

## Typical 208/230 Volt, YD360/480/600 Condensing Unit Wiring Diagram

## Typical Wiring Diagrams

## Typical 460/575 Volt, YD360/480/600 Condensing Unit Wiring Diagram

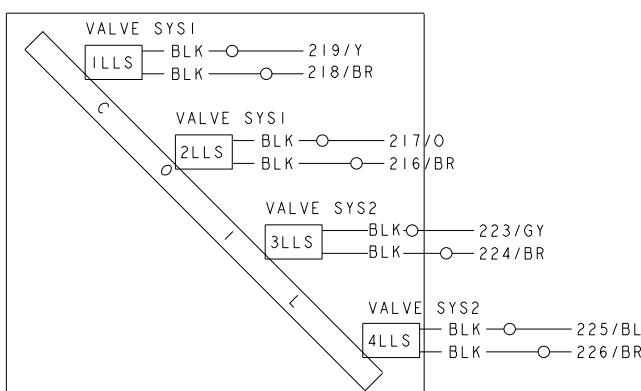

## Typical Field Wiring Diagrams

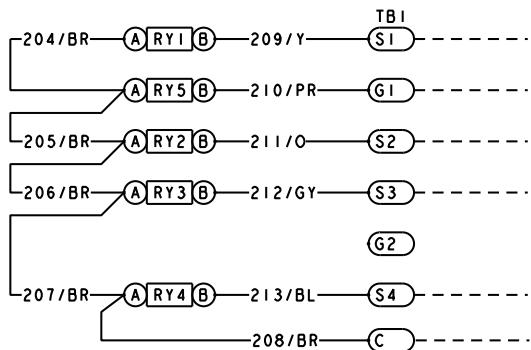

**Typical Field Wiring Diagram ND360/480 Evaporator Units, ND600 Air Handler and M1CZ600A Evaporator Coil when Matched with YD360, 480, 600 Condenser**

**NOTE:** Typical field wiring when OD unit is matched with ND air handler. When matching condensing unit with models other than ND an additional control transformer is required on the Indoor unit.

**NOTE:** For applications on airhandlers/evaporator DX coils other than ND360-600 certified matchups liquid line solenoids may be required for proper operation and refrigerant system dump out.

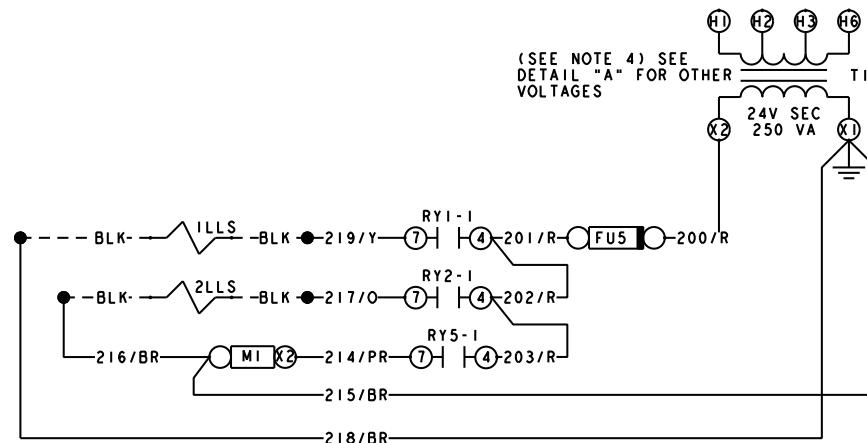

**Typical ND360/480 & M1CZ600A Liquid Line Solenoid Wiring**

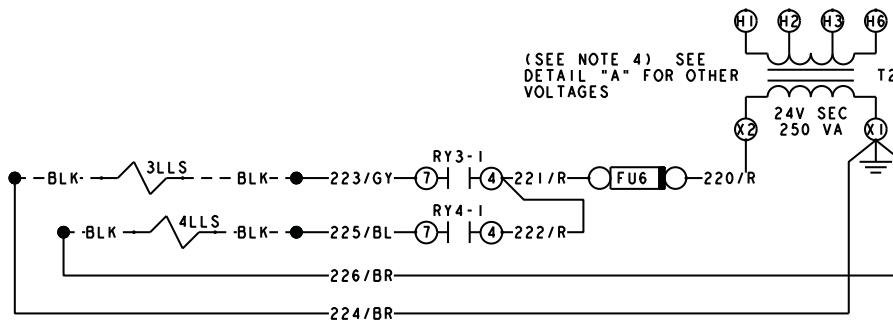

Standard Terminal Block on ND360/480 and ND600 with M1CZ600A models. On non ND models isolation relays must be installed to avoid overloading on 75 VA transformer on condensing unit.

Primary side of transformer connect to line side of power supply.

Primary side of transformer connect to line side of power supply.

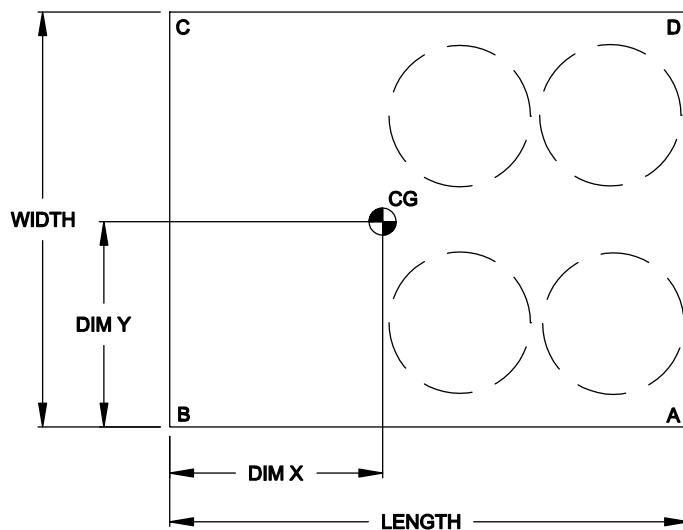

Non ND units may not include any or all of the components required to wire the unit. Use the diagram as general reference only.

#### Typical Liquid Line Solenoid Wiring

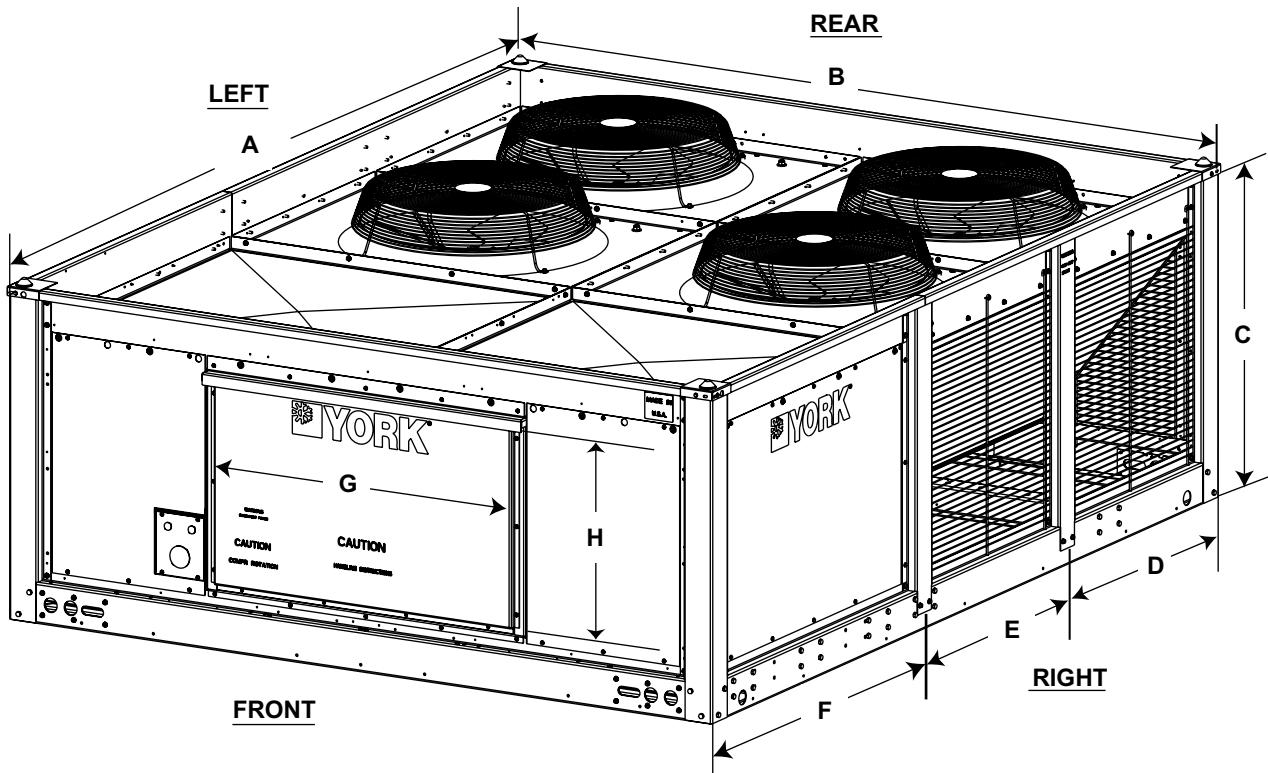

## Weight And Dimension's

### Corner Weights & Center Of Gravity (Inches)

Unit Model	Unit Weight (Lbs.)		Unit Dimensions (Inches)		A	B	C	D	Dim X	Dim Y	Weight A to B	Weight D to C
	Shipping	Operation	Length	Width								
YD360	1875	1895	128.5	88.5	404	537	533	401	55.2	44.1	934	941
YD480	2315	2347	128.5	88.5	486	675	671	483	53.8	44.1	1154	1161
YD600	2345	2381	128.5	88.5	486	693	685	481	53.0	44.0	1166	1179

### Corner Weights & Center Of Gravity

### YD Unit Dimensions

#### Unit Dimensions (Inches)

Model	A	B	C	D	E	F	G	H
YD360	128.5	88.5	37.5	41.8	40.0	46.1	37.1	23.6
YD480	128.5	88.5	57.7	41.8	40.0	46.1	37.1	23.6
YD600	128.5	88.5	57.7	41.8	40.0	46.1	37.1	23.6

#### Piping And Electrical Connections

Piping connections are made from the rear of the unit. Connections can be made directly to the suction and liquid line service valves.

Piping can be routed to the unit from the left or right side.

Electrical connections for power and control wiring is made from the front of all units, left of the electrical control box access. See piping sizes and electrical knockout details.

#### Unit Clearances

Location	Dimensions
Overhead (Top) <sup>1</sup>	120"
Front access panels	36"
Left Side	30"
Right Side	30"
Rear	24"
Bottom <sup>2</sup>	0"

<sup>1</sup> Units must be installed outdoors. Overhanging structures or shrubs should not obstruct condenser air discharge.

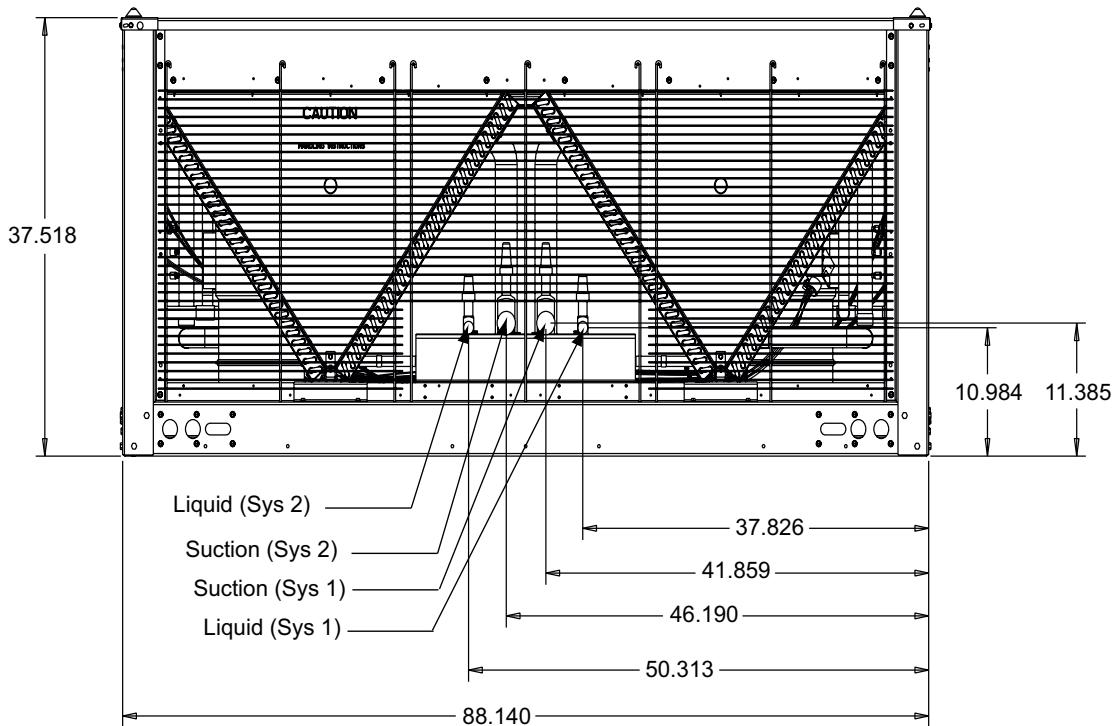

<sup>2</sup> Adequate snow clearance must be provided if winter operation is expected.

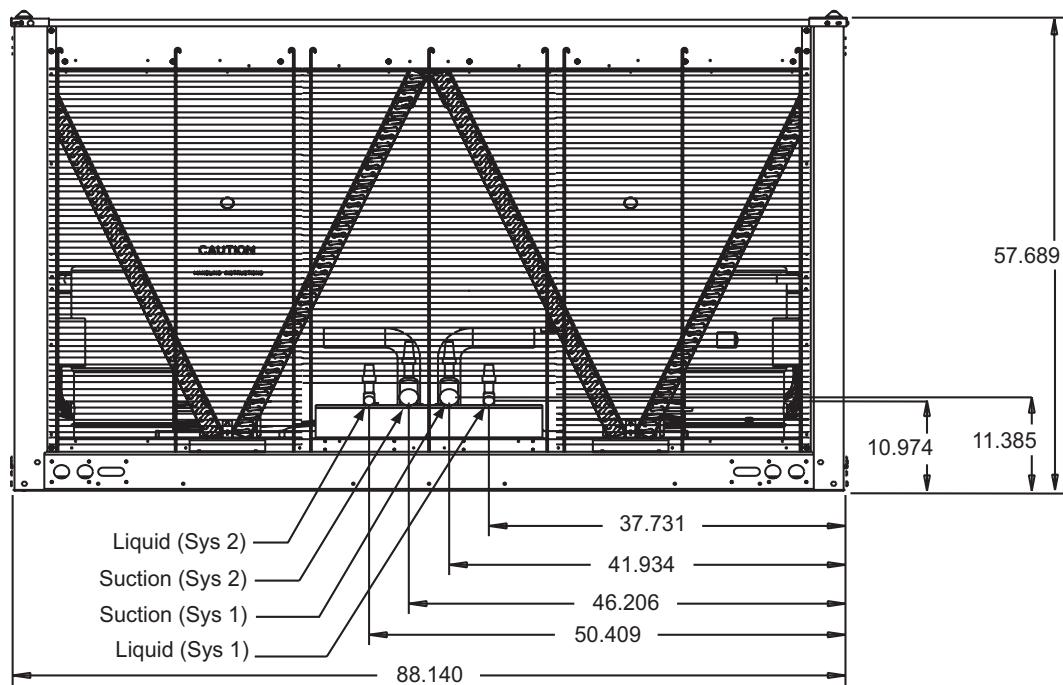

**Piping And Electrical Connection Sizes (30/40/50T) (Inches)**

Connection Entry	Size
Suction Line Sys #1	1-5/8 OD
Liquid Line Sys #1	7/8 OD
Suction Line Sys #2	1-5/8 OD
Liquid Line Sys #2	7/8 OD
Power Wiring Knockout	SEE BELOW
Control Wiring	7/8 HOLE

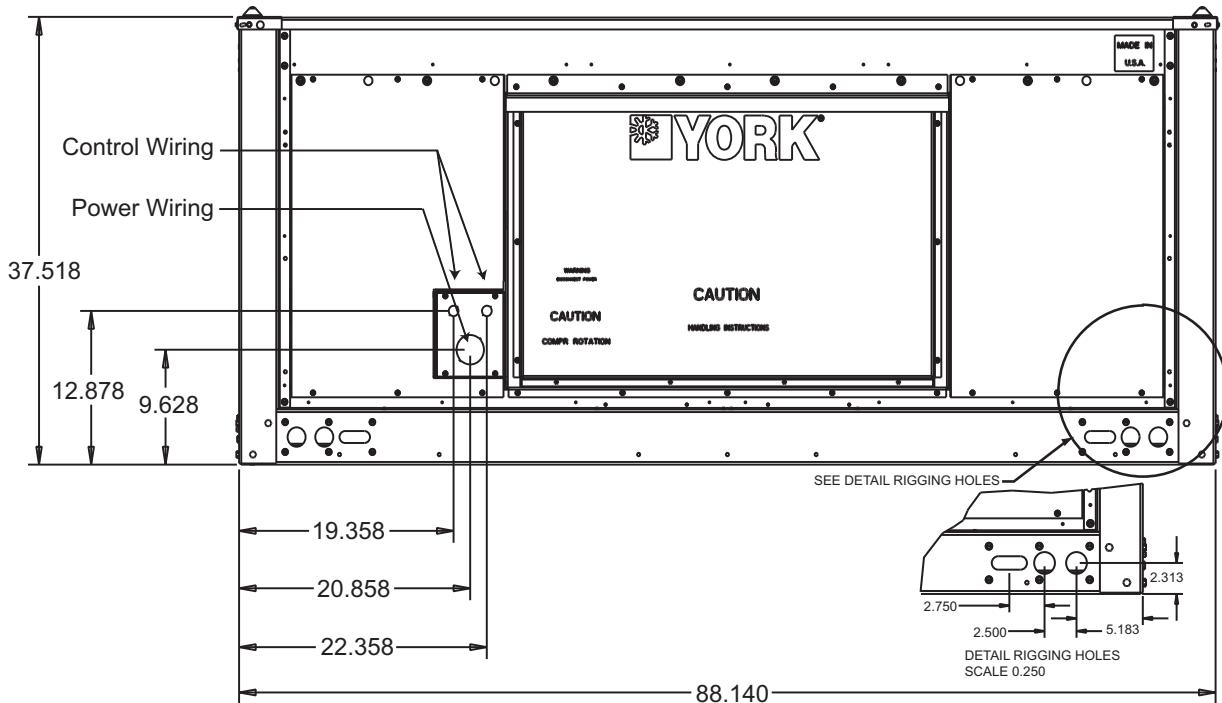

**Electrical Power Knockout Sizes (Inches)**

Connection Entry	30-40-50T/230V	30-40-50T/460-575V
Power Wiring	2-1/2"	1-1/2"

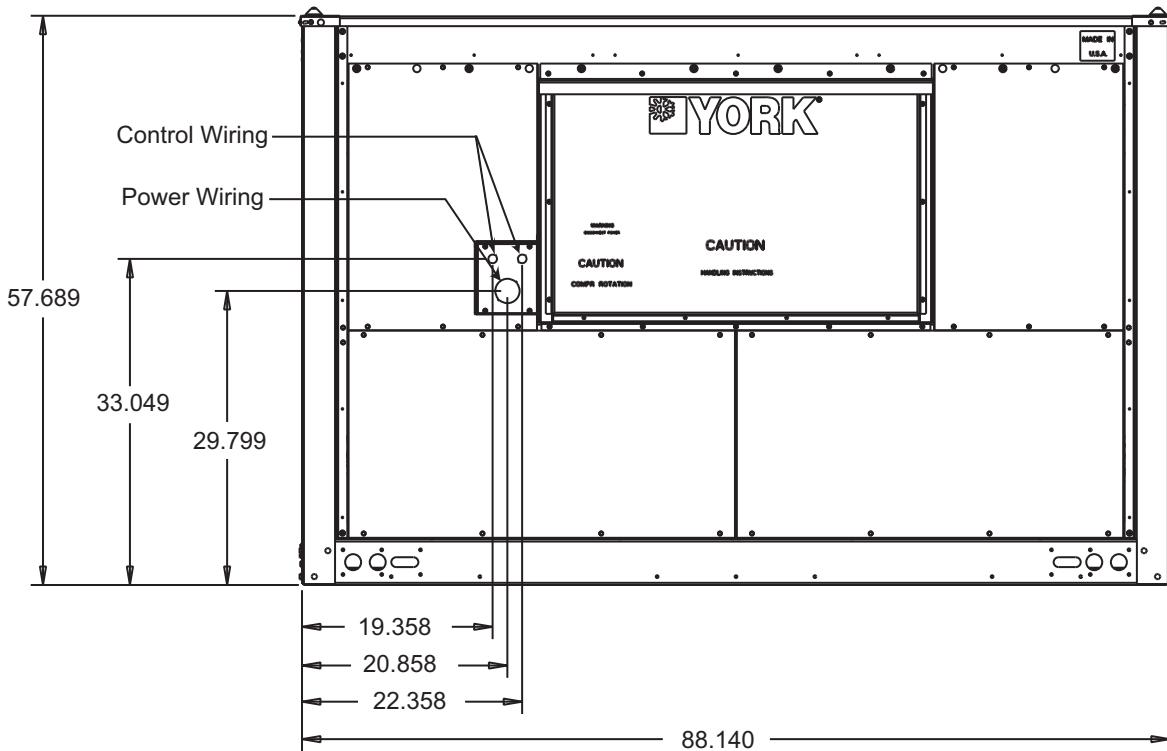

**30 Ton Piping Connections**

#### 40 & 50 Ton Piping Connections

#### 30 Ton Power And Control Wiring Connections

**40 & 50 Ton Power and Control Wiring Connections**
